

IT IS IMPOSSIBLE to escape the impression that people commonly use false standards of measurement—that they seek power, success and wealth for themselves and admire them in others, and that they underestimate what is of true value in life. And yet, in making any general judgement of this sort, we are in danger of forgetting how variegated the human world and its mental life are. There are a few men from whom their contemporaries do not withhold admiration, although their greatness rests on attributes and achievements which are completely foreign to the aims and ideals of the multitude. One might easily be inclined to suppose that it is after all only a minority which appreciates these great men, while the large majority cares nothing for them. But things are probably not as simple as that, thanks to the discrepancies between people's thoughts and their actions, and to the diversity of their wishful impulses.

One of these exceptional few calls himself my friend in his

letters to me. I had sent him my small book that treats religion as an illusion,¹ and he answered that he entirely agreed with my judgement upon religion, but that he was sorry I had not properly appreciated the true source of religious sentiments. This, he says, consists in a peculiar feeling, which he himself is never without, which he finds confirmed by many others, and which he may suppose is present in millions of people. It is a feeling which he would like to call a sensation of 'eternity', a feeling as of something limitless, unbounded—as it were, 'oceanic'. This feeling, he adds, is a purely subjective fact, not an article of faith; it brings with it no assurance of personal immortality, but it is the source of the religious energy which is seized upon by the various Churches and religious systems, directed by them into particular channels, and doubtless also exhausted by them. One may, he thinks, rightly call oneself religious on the ground of this oceanic feeling alone, even if one rejects every belief and every illusion.

The views expressed by the friend whom I so much honour, and who himself once praised the magic of illusion in a poem,² caused me no small difficulty. I cannot discover this 'oceanic' feeling in myself. It is not easy to deal scientifically with feelings. One can attempt to describe their physiological signs. Where this is not possible—and I am afraid that the oceanic

¹ [*The Future of an Illusion* (1927c)].

² [Footnote added 1931:] *Liluli* [1919].—Since the publication of his two books *La vie de Ramakrishna* [1929] and *La vie de Vivekananda* (1930), I need no longer hide the fact that the friend spoken of in the text is Romain Rolland.

feeling too will defy this kind of characterization—nothing remains but to fall back on the ideational content which is most readily associated with the feeling. If I have understood my friend rightly, he means the same thing by it as the consolation offered by an original and somewhat eccentric dramatist to his hero who is facing a self-inflicted death. 'We cannot fall out of this world.'³ That is to say, it is a feeling of an indissoluble bond, of being one with the external world as a whole. I may remark that to me this seems something rather in the nature of an intellectual perception, which is not, it is true, without an accompanying feeling-tone, but only such as would be present with any other act of thought of equal range. From my own experience I could not convince myself of the primary nature of such a feeling. But this gives me no right to deny that it does in fact occur in other people. The only question is whether it is being correctly interpreted and whether it ought to be regarded as the *fons et origo* of the whole need for religion.

I have nothing to suggest which could have a decisive influence on the solution of this problem. The idea of men's receiving an intimation of their connection with the world around them through an immediate feeling which is from the outset directed to that purpose sounds so strange and fits in so badly with the fabric of our psychology that one is justified in attempting to discover a psycho-analytic—that is, a genetic—

³ Christian Dietrich Grabbe [1801–36], *Hannibal*: 'Ja, aus der Welt werden wir nicht fallen. Wir sind einmal darin.' ['Indeed, we shall not fall out of this world. We are in it once and for all.']

explanation of such a feeling. The following line of thought suggests itself. Normally, there is nothing of which we are more certain than the feeling of our self, of our own ego. This ego appears to us as something autonomous and unitary, marked off distinctly from everything else. That such an appearance is deceptive, and that on the contrary the ego is continued inwards, without any sharp delimitation, into an unconscious mental entity which we designate as the id and for which it serves as a kind of facade—this was a discovery first made by psycho-analytic research, which should still have much more to tell us about the relation of the ego to the id. But towards the outside, at any rate, the ego seems to maintain clear and sharp lines of demarcation. There is only one state—admittedly an unusual state, but not one that can be stigmatized as pathological—in which it does not do this. At the height of being in love the boundary between ego and object threatens to melt away. Against all the evidence of his senses, a man who is in love declares that 'I' and 'you' are one, and is prepared to behave as if it were a fact. What can be temporarily done away with by a physiological [i.e. normal] function must also, of course, be liable to be disturbed by pathological processes. Pathology has made us acquainted with a great number of states in which the boundary lines between the ego and the external world become uncertain or in which they are actually drawn incorrectly. There are cases in which parts of a person's own body, even portions of his own mental life—his perceptions, thoughts and feelings—, appear alien to him and

as not belonging to his ego; there are other cases in which he ascribes to the external world things that clearly originate in his own ego and that ought to be acknowledged by it. Thus even the feeling of our own ego is subject to disturbances and the boundaries of the ego are not constant.

Further reflection tells us that the adult's ego-feeling cannot have been the same from the beginning. It must have gone through a process of development, which cannot, of course, be demonstrated but which admits of being constructed with a fair degree of probability.⁴ An infant at the breast does not as yet distinguish his ego from the external world as the source of the sensations flowing in upon him. He gradually learns to do so, in response to various promptings. He must be very strongly impressed by the fact that some sources of excitation, which he will later recognize as his own bodily organs, can provide him with sensations at any moment, whereas other sources evade him from time to time—among them what he desires most of all, his mother's breast—and only reappear as a result of his screaming for help. In this way there is for the first time set over against the ego an 'object', in the form of something which exists 'outside' and which is only forced to appear by a special action. A further incentive to a disengagement of the ego from the general mass of sensations—that is, to the recognition of an 'outside', an external world—is provided by

⁴Cf. the many writings on the topic of ego-development and ego-feeling, dating from Ferenczi's paper on 'Stages in the Development of the Sense of Reality' (1913) to Federn's contributions of 1926, 1927 and later.

the frequent, manifold and unavoidable sensations of pain and unpleasure the removal and avoidance of which is enjoined by the pleasure principle, in the exercise of its unrestricted domination. A tendency arises to separate from the ego everything that can become a source of such unpleasure, to throw it outside and to create a pure pleasure-ego which is confronted by a strange and threatening 'outside'. The boundaries of this primitive pleasure-ego cannot escape rectification through experience. Some of the things that one is unwilling to give up, because they give pleasure, are nevertheless not ego but object; and some sufferings that one seeks to expel turn out to be inseparable from the ego in virtue of their internal origin. One comes to learn a procedure by which, through a deliberate direction of one's sensory activities and through suitable muscular action, one can differentiate between what is internal—what belongs to the ego—and what is external—what emanates from the outer world. In this way one makes the first step towards the introduction of the reality principle which is to dominate future development. This differentiation, of course, serves the practical purpose of enabling one to defend oneself against sensations of unpleasure which one actually feels or with which one is threatened. In order to fend off certain unpleasurable excitations arising from within, the ego can use no other methods than those which it uses against unpleasure coming from without, and this is the starting-point of important pathological disturbances.

In this way, then, the ego detaches itself from the external

world. Or, to put it more correctly, originally the ego includes everything, later it separates off an external world from itself. Our present ego-feeling is, therefore, only a shrunken residue of a much more inclusive—indeed, an all-embracing—feeling which corresponded to a more intimate bond between the ego and the world about it. If we may assume that there are many people in whose mental life this primary ego-feeling has persisted to a greater or less degree, it would exist in them side by side with the narrower and more sharply demarcated ego-feeling of maturity, like a kind of counterpart to it. In that case, the ideational contents appropriate to it would be precisely those of limitlessness and of a bond with the universe—the same ideas with which my friend elucidated the 'oceanic' feeling.

But have we a right to assume the survival of something that was originally there, alongside of what was later derived from it? Undoubtedly. There is nothing strange in such a phenomenon, whether in the mental field or elsewhere. In the animal kingdom we hold to the view that the most highly developed species have proceeded from the lowest; and yet we find all the simple forms still in existence to-day. The race of the great saurians is extinct and has made way for the mammals; but a true representative of it, the crocodile, still lives among us. This analogy may be too remote, and it is also weakened by the circumstance that the lower species which survive are for the most part not the true ancestors of the present-day more highly developed species. As a rule the intermediate links have died out and are known to us only through reconstruction. In

the realm of the mind, on the other hand, what is primitive is so commonly preserved alongside of the transformed version which has arisen from it that it is unnecessary to give instances as evidence. When this happens it is usually in consequence of a divergence in development: one portion (in the quantitative sense) of an attitude or instinctual impulse has remained unaltered, while another portion has undergone further development.

This brings us to the more general problem of preservation in the sphere of the mind. The subject has hardly been studied as yet; but it is so attractive and important that we may be allowed to turn our attention to it for a little, even though our excuse is insufficient. Since we overcame the error of supposing that the forgetting we are familiar with signified a destruction of the memory-trace—that is, its annihilation—we have been inclined to take the opposite view, that in mental life nothing which has once been formed can perish—that everything is somehow preserved and that in suitable circumstances (when, for instance, regression goes back far enough) it can once more be brought to light. Let us try to grasp what this assumption involves by taking an analogy from another field. We will choose as an example the history of the Eternal City.⁵ Historians tell us that the oldest Rome was the *Roma Quadrata*, a fenced settlement on the Palatine. Then followed the phase of the *Septimontium*, a federation of the settlements on the different hills; after that came the city bounded by the Servian wall,

⁵ Based on *The Cambridge Ancient History*, 7 (1928): 'The Founding of Rome' by Hugh Last.

and later still, after all the transformations during the periods of the republic and the early Caesars, the city which the Emperor Aurelian surrounded with his walls. We will not follow the changes which the city went through any further, but we will ask ourselves how much a visitor, whom we will suppose to be equipped with the most complete historical and topographical knowledge, may still find left of these early stages in the Rome of to-day. Except for a few gaps, he will see the wall of Aurelian almost unchanged. In some places he will be able to find sections of the Servian wall where they have been excavated and brought to light. If he knows enough—more than present-day archaeology does—he may perhaps be able to trace out in the plan of the city the whole course of that wall and the outline of the *Roma Quadrata*. Of the buildings which once occupied this ancient area he will find nothing, or only scanty remains, for they exist no longer. The best information about Rome in the republican era would only enable him at the most to point out the sites where the temples and public buildings of that period stood. Their place is now taken by ruins, but not by ruins of themselves but of later restorations made after fires or destruction. It is hardly necessary to remark that all these remains of ancient Rome are found dovetailed into the jumble of a great metropolis which has grown up in the last few centuries since the Renaissance. There is certainly not a little that is ancient still buried in the soil of the city or beneath its modern buildings. This is the manner in which the past is preserved in historical sites like Rome.

Now let us, by a flight of imagination, suppose that Rome is not a human habitation but a psychical entity with a similarly long and copious past—an entity, that is to say, in which nothing that has once come into existence will have passed away and all the earlier phases of development continue to exist alongside the latest one. This would mean that in Rome the palaces of the Caesars and the Septizonium of Septimius Severus would still be rising to their old height on the Palatine and that the castle of S. Angelo would still be carrying on its battlements the beautiful statues which graced it until the siege by the Goths, and so on. But more than this. In the place occupied by the Palazzo Caffarelli would once more stand—without the Palazzo having to be removed—the Temple of Jupiter Capitolinus; and this not only in its latest shape, as the Romans of the Empire saw it, but also in its earliest one, when it still showed Etruscan forms and was ornamented with terra-cotta antefixes. Where the Coliseum now stands we could at the same time admire Nero's vanished Golden House. On the Piazza of the Pantheon we should find not only the Pantheon of today, as it was bequeathed to us by Hadrian, but, on the same site, the original edifice erected by Agrippa; indeed, the same piece of ground would be supporting the church of Santa Maria sopra Minerva and the ancient temple over which it was built. And the observer would perhaps only have to change the direction of his glance or his position in order to call up the one view or the other.

There is clearly no point in spinning our phantasy any fur-

ther, for it leads to things that are unimaginable and even absurd. If we want to represent historical sequence in spatial terms we can only do it by juxtaposition in space: the same space cannot have two different contents. Our attempt seems to be an idle game. It has only one justification. It shows us how far we are from mastering the characteristics of mental life by representing them in pictorial terms.

There is one further objection which has to be considered. The question may be raised why we chose precisely the past of a city to compare with the past of the mind. The assumption that everything past is preserved holds good even in mental life only on condition that the organ of the mind has remained intact and that its tissues have not been damaged by trauma or inflammation. But destructive influences which can be compared to causes of illness like these are never lacking in the history of a city, even if it has had a less chequered past than Rome, and even if, like London, it has hardly ever suffered from the visitations of an enemy. Demolitions and replacement of buildings occur in the course of the most peaceful development of a city. A city is thus *a priori* unsuited for a comparison of this sort with a mental organism.

We bow to this objection; and, abandoning our attempt to draw a striking contrast, we will turn instead to what is after all a more closely related object of comparison—the body of an animal or a human being. But here, too, we find the same thing. The earlier phases of development are in no sense still preserved; they have been absorbed into the later phases for

which they have supplied the material. The embryo cannot be discovered in the adult. The thymus gland of childhood is replaced after puberty by connective tissue, but is no longer present itself; in the marrow-bones of the grown man I can, it is true, trace the outline of the child's bone, but it itself has disappeared, having lengthened and thickened until it has attained its definitive form. The fact remains that only in the mind is such a preservation of all the earlier stages alongside of the final form possible, and that we are not in a position to represent this phenomenon in pictorial terms.

Perhaps we are going too far in this. Perhaps we ought to content ourselves with asserting that what is past in mental life *may* be preserved and is not *necessarily* destroyed. It is always possible that even in the mind some of what is old is effaced or absorbed—whether in the normal course of things or as an exception—to such an extent that it cannot be restored or revived by any means; or that preservation in general is dependent on certain favourable conditions. It is possible, but we know nothing about it. We can only hold fast to the fact that it is rather the rule than the exception for the past to be preserved in mental life.

Thus we are perfectly willing to acknowledge that the 'oceanic' feeling exists in many people, and we are inclined to trace it back to an early phase of ego-feeling. The further question then arises, what claim this feeling has to be regarded as the source of religious needs.

To me the claim does not seem compelling. After all, a feel-

ing can only be a source of energy if it is itself the expression of a strong need. The derivation of religious needs from the infant's helplessness and the longing for the father aroused by it seems to me incontrovertible, especially since the feeling is not simply prolonged from childhood days, but is permanently sustained by fear of the superior power of Fate. I cannot think of any need in childhood as strong as the need for a father's protection. Thus the part played by the oceanic feeling, which might seek something like the restoration of limitless narcissism, is ousted from a place in the foreground. The origin of the religious attitude can be traced back in clear outlines as far as the feeling of infantile helplessness. There may be something further behind that, but for the present it is wrapped in obscurity.

I can imagine that the oceanic feeling became connected with religion later on. The 'oneness with the universe' which constitutes its ideational content sounds like a first attempt at a religious consolation, as though it were another way of disclaiming the danger which the ego recognizes as threatening it from the external world. Let me admit once more that it is very difficult for me to work with these almost intangible quantities. Another friend of mine, whose insatiable craving for knowledge has led him to make the most unusual experiments and has ended by giving him encyclopaedic knowledge, has assured me that through the practices of Yoga, by withdrawing from the world, by fixing the attention on bodily functions and by peculiar methods of breathing, one can in fact evoke new

sensations and coenaesthesias in oneself, which he regards as regressions to primordial states of mind which have long ago been overlaid. He sees in them a physiological basis, as it were, of much of the wisdom of mysticism. It would not be hard to find connections here with a number of obscure modifications of mental life, such as trances and ecstasies. But I am moved to exclaim in the words of Schiller's diver:—

' . . . *Es freue sich,
Wer da atmet im rosigten Licht,*'⁶

⁶ ['Let him rejoice who breathes up here in the roseate light! Schiller, 'Der Taucher'.]

II

IN MY *Future of an Illusion* [1927c] I was concerned much less with the deepest sources of the religious feeling than with what the common man understands by his religion—with the system of doctrines and promises which on the one hand explains to him the riddles of this world with enviable completeness, and, on the other, assures him that a careful Providence will watch over his life and will compensate him in a future existence for any frustrations he suffers here. The common man cannot imagine this Providence otherwise than in the figure of an enormously exalted father. Only such a being can understand the needs of the children of men and be softened by their prayers and placated by the signs of their remorse. The whole thing is so patently infantile, so foreign to reality, that to anyone with a friendly attitude to humanity it is painful to think that the great majority of mortals will never be able to rise above this view of life. It is still more humiliating to discover

how large a number of people living to-day, who cannot but see that this religion is not tenable, nevertheless try to defend it piece by piece in a series of pitiful rearguard actions. One would like to mix among the ranks of the believers in order to meet these philosophers, who think they can rescue the God of religion by replacing him by an impersonal, shadowy and abstract principle, and to address them with the warning words: 'Thou shalt not take the name of the Lord thy God in vain!' And if some of the great men of the past acted in the same way, no appeal can be made to their example: we know why they were obliged to.

Let us return to the common man and to his religion—the only religion which ought to bear that name. The first thing that we think of is the well-known saying of one of our great poets and thinkers concerning the relation of religion to art and science:

*Wer Wissenschaft und Kunst besitzt, hat auch Religion,
Wer jene beide nicht besitzt, der habe Religion!*¹

This saying on the one hand draws an antithesis between religion and the two highest achievements of man, and on the other, asserts that, as regards their value in life, those achievements and religion can represent or replace each other. If we

¹ ['He who possesses science and art also has religion; but he who possesses neither of those two, let him have religion!']—Goethe, *Zahme Xenien* IX (Gedichte aus dem Nachlass).

also set out to deprive the common man, [who has neither science nor art] of his religion, we shall clearly not have the poet's authority on our side. We will choose a particular path to bring us nearer an appreciation of his words. Life, as we find it, is too hard for us; it brings us too many pains, disappointments and impossible tasks. In order to bear it we cannot dispense with palliative measures. 'We cannot do without auxiliary constructions', as Theodor Fontane tells us.² There are perhaps three such measures: powerful deflections, which cause us to make light of our misery; substitutive satisfactions, which diminish it; and intoxicating substances, which make us insensitive to it. Something of the kind is indispensable.³ Voltaire has deflections in mind when he ends *Candide* with the advice to cultivate one's garden; and scientific activity is a deflection of this kind, too. The substitutive satisfactions, as offered by art, are illusions in contrast with reality, but they are none the less psychically effective, thanks to the role which phantasy has assumed in mental life. The intoxicating substances influence our body and alter its chemistry. It is no simple matter to see where religion has its place in this series. We must look further afield.

The question of the purpose of human life has been raised countless times; it has never yet received a satisfactory answer and perhaps does not admit of one. Some of those who have asked it have added that if it should turn out that life has *no*

² [It has not been possible to trace this quotation.]

³ In *Die Fromme Helene* Wilhelm Busch has said the same thing on a lower plane: 'Wer Sorgen hat, hat auch Likör.' ['He who has cares has brandy too.']

purpose, it would lose all value for them. But this threat alters nothing. It looks, on the contrary, as though one had a right to dismiss the question, for it seems to derive from the human presumptuousness, many other manifestations of which are already familiar to us. Nobody talks about the purpose of the life of animals, unless, perhaps, it may be supposed to lie in being of service to man. But this view is not tenable either, for there are many animals of which man can make nothing, except to describe, classify and study them; and innumerable species of animals have escaped even this use, since they existed and became extinct before man set eyes on them. Once again, only religion can answer the question of the purpose of life. One can hardly be wrong in concluding that the idea of life having a purpose stands and falls with the religious system.

We will therefore turn to the less ambitious question of what men themselves show by their behaviour to be the purpose and intention of their lives. What do they demand of life and wish to achieve in it? The answer to this can hardly be in doubt. They strive after happiness; they want to become happy and to remain so. This endeavour has two sides, a positive and a negative aim. It aims, on the one hand, at an absence of pain and unpleasure, and, on the other, at the experiencing of strong feelings of pleasure. In its narrower sense the word 'happiness' only relates to the last. In conformity with this dichotomy in his aims, man's activity develops in two directions, according as it seeks to realize—in the main, or even exclusively—the one or the other of these aims.

As we see, what decides the purpose of life is simply the programme of the pleasure principle. This principle dominates the operation of the mental apparatus from the start. There can be no doubt about its efficacy, and yet its programme is at loggerheads with the whole world, with the macrocosm as much as with the microcosm. There is no possibility at all of its being carried through; all the regulations of the universe run counter to it. One feels inclined to say that the intention that man should be 'happy' is not included in the plan of 'Creation'. What we call happiness in the strictest sense comes from the (preferably sudden) satisfaction of needs which have been dammed up to a high degree, and it is from its nature only possible as an episodic phenomenon. When any situation that is desired by the pleasure principle is prolonged, it only produces a feeling of mild contentment. We are so made that we can derive intense enjoyment only from a contrast and very little from a state of things.⁴ Thus our possibilities of happiness are already restricted by our constitution. Unhappiness is much less difficult to experience. We are threatened with suffering from three directions: from our own body, which is doomed to decay and dissolution and which cannot even do without pain

⁴ Goethe, indeed, warns us that 'nothing is harder to bear than a succession of fair days.'

[Alles in der Welt lässt sich ertragen,
Nur nicht eine Reihe von schönen
Tagen.
(Weimar, 1810–12.)]

But this may be an exaggeration.

and anxiety as warning signals; from the external world, which may rage against us with overwhelming and merciless forces of destruction; and finally from our relations to other men. The suffering which comes from this last source is perhaps more painful to us than any other. We tend to regard it as a kind of gratuitous addition, although it cannot be any less fatefully inevitable than the suffering which comes from elsewhere.

It is no wonder if, under the pressure of these possibilities of suffering, men are accustomed to moderate their claims to happiness—just as the pleasure principle itself, indeed, under the influence of the external world, changed into the more modest reality principle—, if a man thinks himself happy merely to have escaped unhappiness or to have survived his suffering, and if in general the task of avoiding suffering pushes that of obtaining pleasure into the background. Reflection shows that the accomplishment of this task can be attempted along very different paths; and all these paths have been recommended by the various schools of worldly wisdom and put into practice by men. An unrestricted satisfaction of every need presents itself as the most enticing method of conducting one's life, but it means putting enjoyment before caution, and soon brings its own punishment. The other methods, in which avoidance of unpleasure is the main purpose, are differentiated according to the source of unpleasure to which their attention is chiefly turned. Some of these methods are extreme and some moderate; some are one-sided and some attack the problem simultaneously at several points. Against the suffering which may

come upon one from human relationships the readiest safeguard is voluntary isolation, keeping oneself aloof from other people. The happiness which can be achieved along this path is, as we see, the happiness of quietness. Against the dreaded external world one can only defend oneself by some kind of turning away from it, if one intends to solve the task by oneself. There is, indeed, another and better path: that of becoming a member of the human community, and, with the help of a technique guided by science, going over to the attack against nature and subjecting her to the human will. Then one is working with all for the good of all. But the most interesting methods of averting suffering are those which seek to influence our own organism. In the last analysis, all suffering is nothing else than sensation; it only exists in so far as we feel it, and we only feel it in consequence of certain ways in which our organism is regulated.

The crudest, but also the most effective among these methods of influence is the chemical one—intoxication. I do not think that anyone completely understands its mechanism, but it is a fact that there are foreign substances which, when present in the blood or tissues, directly cause us pleasurable sensations; and they also so alter the conditions governing our sensibility that we become incapable of receiving unpleasurable impulses. The two effects not only occur simultaneously, but seem to be intimately bound up with each other. But there must be substances in the chemistry of our own bodies which have similar effects, for we know at least one pathological state, mania, in which a condition similar to intoxication arises

without the administration of any intoxicating drug. Besides this, our normal mental life exhibits oscillations between a comparatively easy liberation of pleasure and a comparatively difficult one, parallel with which there goes a diminished or an increased receptivity to unpleasure. It is greatly to be regretted that this toxic side of mental processes has so far escaped scientific examination. The service rendered by intoxicating media in the struggle for happiness and in keeping misery at a distance is so highly prized as a benefit that individuals and peoples alike have given them an established place in the economics of their libido. We owe to such media not merely the immediate yield of pleasure, but also a greatly desired degree of independence from the external world. For one knows that, with the help of this 'drowner of cares' one can at any time withdraw from the pressure of reality and find refuge in a world of one's own with better conditions of sensibility. As is well known, it is precisely this property of intoxicants which also determines their danger and their injuriousness. They are responsible, in certain circumstances, for the useless waste of a large quota of energy which might have been employed for the improvement of the human lot.

The complicated structure of our mental apparatus admits, however, of a whole number of other influences. Just as a satisfaction of instinct spells happiness for us, so severe suffering is caused us if the external world lets us starve, if it refuses to sate our needs. One may therefore hope to be freed from a part of one's sufferings by influencing the instinctual impulses. This

type of defence against suffering is no longer brought to bear on the sensory apparatus; it seeks to master the internal sources of our needs. The extreme form of this is brought about by killing off the instincts, as is prescribed by the worldly wisdom of the East and practised by Yoga. If it succeeds, then the subject has, it is true, given up all other activities as well—he has sacrificed his life; and, by another path, he has once more only achieved the happiness of quietness. We follow the same path when our aims are less extreme and we merely attempt to *control* our instinctual life. In that case, the controlling elements are the higher psychical agencies, which have subjected themselves to the reality principle. Here the aim of satisfaction is not by any means relinquished; but a certain amount of protection against suffering is secured, in that non-satisfaction is not so painfully felt in the case of instincts kept in dependence as in the case of uninhibited ones. As against this, there is an undeniable diminution in the potentialities of enjoyment. The feeling of happiness derived from the satisfaction of a wild instinctual impulse untamed by the ego is incomparably more intense than that derived from sating an instinct that has been tamed. The irresistibility of perverse instincts, and perhaps the attraction in general of forbidden things finds an economic explanation here.

Another technique for fending off suffering is the employment of the displacements of libido which our mental apparatus permits of and through which its function gains so much in flexibility. The task here is that of shifting the instinctual aims in such a way that they cannot come up against frustration

from the external world. In this, sublimation of the instincts lends its assistance. One gains the most if one can sufficiently heighten the yield of pleasure from the sources of psychical and intellectual work. When that is so, fate can do little against one. A satisfaction of this kind, such as an artist's joy in creating, in giving his phantasies body, or a scientist's in solving problems or discovering truths, has a special quality which we shall certainly one day be able to characterize in metapsychological terms. At present we can only say figuratively that such satisfactions seem 'finer and higher'. But their intensity is mild as compared with that derived from the satiation of crude and primary instinctual impulses; it does not convulse our physical being. And the weak point of this method is that it is not applicable generally: it is accessible to only a few people. It presupposes the possession of special dispositions and gifts which are far from being common to any practical degree. And even to the few who do possess them, this method cannot give complete protection from suffering. It creates no impenetrable armour against the arrows of fortune, and it habitually fails when the source of suffering is a person's own body.⁵

⁵When there is no special disposition in a person which imperatively prescribes what direction his interest in life shall take, the ordinary professional work that is open to everyone can play the part assigned to it by Voltaire's wise advice [p. 51 above]. It is not possible, within the limits of a short survey, to discuss adequately the significance of work for the economics of the libido. No other technique for the conduct of life attaches the individual so firmly to reality as laying emphasis on work; for his work at least gives him a secure place in a portion of reality, in the human community. The possibility it offers of displacing a large amount of libidinal

While this procedure already clearly shows an intention of making oneself independent of the external world by seeking satisfaction in internal, psychical processes, the next procedure brings out those features yet more strongly. In it, the connection with reality is still further loosened; satisfaction is obtained from illusions, which are recognized as such without the discrepancy between them and reality being allowed to interfere with enjoyment. The region from which these illusions arise is the life of the imagination; at the time when the development of the sense of reality took place, this region was expressly exempted from the demands of reality-testing and was set apart for the purpose of fulfilling wishes which were difficult to carry out. At the head of these satisfactions through phantasy stands the enjoyment of works of art—an enjoyment which, by the agency of the artist, is made accessible even to those who are not themselves creative.⁶ People who are receptive to the influence of art cannot set too high a value on it as

components, whether narcissistic, aggressive or even erotic, on to professional work and on to the human relations connected with it lends it a value by no means second to what it enjoys as something indispensable to the preservation and justification of existence in society. Professional activity is a source of special satisfaction if it is a freely chosen one—if, that is to say, by means of sublimation, it makes possible the use of existing inclinations, of persisting or constitutionally reinforced instinctual impulses. And yet, as a path to happiness, work is not highly prized by men. They do not strive after it as they do after other possibilities of satisfaction. The great majority of people only work under the stress of necessity, and this natural human aversion to work raises most difficult social problems.

⁶Cf. 'Formulations on the Two Principles of Mental Functioning' (1911b), and Lecture XXIII of my *Introductory Lectures* (1916–17).

a source of pleasure and consolation in life. Nevertheless the mild narcosis induced in us by art can do no more than bring about a transient withdrawal from the pressure of vital needs, and it is not strong enough to make us forget real misery.

Another procedure operates more energetically and more thoroughly. It regards reality as the sole enemy and as the source of all suffering, with which it is impossible to live, so that one must break off all relations with it if one is to be in any way happy. The hermit turns his back on the world and will have no truck with it. But one can do more than that; one can try to re-create the world, to build up in its stead another world in which its most unbearable features are eliminated and replaced by others that are in conformity with one's own wishes. But whoever, in desperate defiance, sets out upon this path to happiness will as a rule attain nothing. Reality is too strong for him. He becomes a madman, who for the most part finds no one to help him in carrying through his delusion. It is asserted, however, that each one of us behaves in some one respect like a paranoic, corrects some aspect of the world which is unbearable to him by the construction of a wish and introduces this delusion into reality. A special importance attaches to the case in which this attempt to procure a certainty of happiness and a protection against suffering through a delusional remoulding of reality is made by a considerable number of people in common. The religions of mankind must be classed among the mass-delusions of this kind. No one, needless to say, who shares a delusion ever recognizes it as such.

I do not think that I have made a complete enumeration of the methods by which men strive to gain happiness and keep suffering away and I know, too, that the material might have been differently arranged. One procedure I have not yet mentioned—not because I have forgotten it but because it will concern us later in another connection. And how could one possibly forget, of all others, this technique in the art of living? It is conspicuous for a most remarkable combination of characteristic features. It, too, aims of course at making the subject independent of Fate (as it is best to call it), and to that end it locates satisfaction in internal mental processes, making use, in so doing, of the displaceability of the libido of which we have already spoken [p. 56]. But it does not turn away from the external world; on the contrary, it clings to the objects belonging to that world and obtains happiness from an emotional relationship to them. Nor is it content to aim at an avoidance of unpleasure—a goal, as we might call it, of weary resignation; it passes this by without heed and holds fast to the original, passionate striving for a positive fulfilment of happiness. And perhaps it does in fact come nearer to this goal than any other method. I am, of course, speaking of the way of life which makes love the centre of everything, which looks for all satisfaction in loving and being loved. A psychical attitude of this sort comes naturally enough to all of us; one of the forms in which love manifests itself—sexual love—has given us our most intense experience of an overwhelming sensation of pleasure and has thus furnished us with a pattern for our search

for happiness. What is more natural than that we should persist in looking for happiness along the path on which we first encountered it? The weak side of this technique of living is easy to see; otherwise no human being would have thought of abandoning this path to happiness for any other. It is that we are never so defenceless against suffering as when we love, never so helplessly unhappy as when we have lost our loved object or its love. But this does not dispose of the technique of living based on the value of love as a means to happiness. There is much more to be said about it. [See below, p. 88]

We may go on from here to consider the interesting case in which happiness in life is predominantly sought in the enjoyment of beauty, wherever beauty presents itself to our senses and our judgement—the beauty of human forms and gestures, of natural objects and landscapes and of artistic and even scientific creations. This aesthetic attitude to the goal of life offers little protection against the threat of suffering, but it can compensate for a great deal. The enjoyment of beauty has a peculiar, mildly intoxicating quality of feeling. Beauty has no obvious use; nor is there any clear cultural necessity for it. Yet civilization could not do without it. The science of aesthetics investigates the conditions under which things are felt as beautiful, but it has been unable to give any explanation of the nature and origin of beauty, and, as usually happens, lack of success is concealed beneath a flood of resounding and empty words. Psychoanalysis, unfortunately, has scarcely anything to say about beauty either. All that seems certain is its derivation

from the field of sexual feeling. The love of beauty seems a perfect example of an impulse inhibited in its aim. 'Beauty' and 'attraction'⁷ are originally attributes of the sexual object. It is worth remarking that the genitals themselves, the sight of which is always exciting, are nevertheless hardly ever judged to be beautiful; the quality of beauty seems, instead, to attach to certain secondary sexual characters.

In spite of the incompleteness [of my enumeration], I will venture on a few remarks as a conclusion to our enquiry. The programme of becoming happy, which the pleasure principle imposes on us, cannot be fulfilled; yet we must not—indeed, we cannot—give up our efforts to bring it nearer to fulfillment by some means or other. Very different paths may be taken in that direction, and we may give priority either to the positive aspect of the aim, that of gaining pleasure, or to its negative one, that of avoiding unpleasure. By none of these paths can we attain all that we desire. Happiness, in the reduced sense in which we recognize it as possible, is a problem of the economics of the individual's libido. There is no golden rule which applies to everyone: every man must find out for himself in what particular fashion he can be saved.⁸ All kinds of different factors will operate to direct his choice. It is a question of how much real satisfaction he can expect to get from the external

⁷[The German 'Reiz' means 'stimulus' as well as 'charm' or 'attraction'.]

⁸[The allusion is to a saying attributed to Frederick the Great: 'in my State every man can be saved after his own fashion.' Freud had quoted this a short time before, in *Lay Analysis* (1926e), *Standard Ed.*, 20, 236.]

world, how far he is led to make himself independent of it, and, finally, how much strength he feels he has for altering the world to suit his wishes. In this, his psychical constitution will play a decisive part, irrespectively of the external circumstances. The man who is predominantly erotic will give first preference to his emotional relationships to other people; the narcissistic man, who inclines to be self-sufficient, will seek his main satisfactions in his internal mental processes; the man of action will never give up the external world on which he can try out his strength. As regards the second of these types, the nature of his talents and the amount of instinctual sublimation open to him will decide where he shall locate his interests. Any choice that is pushed to an extreme will be penalized by exposing the individual to the dangers which arise if a technique of living that has been chosen as an exclusive one should prove inadequate. Just as a cautious business-man avoids tying up all his capital in one concern, so, perhaps, worldly wisdom will advise us not to look for the whole of our satisfaction from a single aspiration. Its success is never certain, for that depends on the convergence of many factors, perhaps on none more than on the capacity of the psychical constitution to adapt its function to the environment and then to exploit that environment for a yield of pleasure. A person who is born with a specially unfavourable instinctual constitution, and who has not properly undergone the transformation and rearrangement of his libidinal components which is indispensable for later

achievements, will find it hard to obtain happiness from his external situation, especially if he is faced with tasks of some difficulty. As a last technique of living, which will at least bring him substitutive satisfactions, he is offered that of a flight into neurotic illness—a flight which he usually accomplishes when he is still young. The man who sees his pursuit of happiness come to nothing in later years can still find consolation in the yield of pleasure of chronic intoxication; or he can embark on the desperate attempt at rebellion seen in a psychosis.⁹

Religion restricts this play of choice and adaptation, since it imposes equally on everyone its own path to the acquisition of happiness and protection from suffering. Its technique consists in depressing the value of life and distorting the picture of the real world in a delusional manner—which presupposes an intimidation of the intelligence. At this price, by forcibly fixing them in a state of psychical infantilism and by drawing them into a mass-delusion, religion succeeds in sparing many people an individual neurosis. But hardly anything more. There are, as we have said, many paths which *may* lead to such happiness as is attainable by men, but there is none which does so for certain. Even religion cannot keep its promise. If the

⁹[Footnote added 1931:] I feel impelled to point out one at least of the gaps that have been left in the account given above. No discussion of the possibilities of human happiness should omit to take into consideration the relation between narcissism and object libido. We require to know what being essentially self-dependent signifies for the economics of the libido.

believer finally sees himself obliged to speak of God's 'inscrutable decrees', he is admitting that all that is left to him as a last possible consolation and source of pleasure in his suffering is an unconditional submission. And if he is prepared for that, he could probably have spared himself the *détour* he has made.
